

THE PEAK 2 SPECIFICATIONS

At **Nestd™** we aim to make your decision as easy as possible. We recognise that comparing options and pricing can be daunting so our approach is to be upfront so we can support you in the process of making this significant decision. We want you to enjoy the process of buying your compact home. Many factors influence how a home is priced, and this brochure is designed to assist you in making sense of the costs associated with the **Nestd™** building process.

BASE PRICE

Each location for a home is different. So we start with a base price for each of our homes, then add the site-specific costs and finally we consider any services, fittings and fixture upgrades you may desire. Our base price reflects our philosophy for sustainability, design and quality and these are all included as standard features in the list below.

VARIABLE COSTS

Each project is unique and may include different site or council variables including issues such as off-grid versus connected to mains, sloping or rugged blocks, difficult versus easy access.

The variable costs that apply to each project are:

- Preparing site for connections - electricity, water and sewerage
- Transport and installation on site – transporting your prefab/modular home to the site, permits required and a crane if needed.
- Base footings/structure to sit the home on.

REGULATORY REQUIREMENT UPGRADES

Nestd™ works with its partners to build houses which deliver more than the base regulatory Energy Rating. However, each owner will be required to submit an energy rating report in accordance with the requirements of the particular state or territory. Depending on where your site is located you may also be required to upgrade components of the house to comply with BAL ratings (Bushfire Attack Level).

OPTIONS, FITTINGS & FINISHES UPGRADES

You may wish to take advantage of the options **Nestd™** provides on page 4.

These upgrades are made at the time of colour selection and specifications and may include stone benchtops, non-standard splashbacks, upgraded kitchen appliances, the list goes on...

BASE PRICE INCLUSIONS
